

Training Course

| PoC Training / Hackathon (IIOT-POC1) | |
|--------------------------------------|---|
| Objective | <p>This course is organized as a hackathon rather than a standard training course, with the goal to add third-party products and services from Moxa's IIoT partners to the solution. Afterwards, participants will be able to build a sensor-to-cloud application using Moxa products as well as partner software and hardware, like they would, when developing a proof of concept (PoC) for a customer.</p> |
| Prerequisites | <p>All Moxa Technical College IIoT Track Trainings Bring your own device(s) + subscription (where required) Experience with selected IIoT partner equipment and applications Participate in a preparatory session 4-8 weeks ahead (to ensure availability of required equipment, accessories, etc.) Select one or few IIoT partner(s)</p> |
| Content | <p>In this course participants will learn how to put together their own simple sensor-to-cloud application based on Moxa IIoT gateways, using IIoT Partner sensors, software and cloud</p> <p>Specifically, after this training participants will be able to put together a Proof of Concept system for customers within hours</p> |
| Duration | 2 Days |
| Certification | MTC Advanced IIoT |
